

ABSTRACT

There is provided a resin composition for a fuel cell member which gives only a small amount of eluting ions. A resin composition for a fuel cell member is formed to include 60 to 85 wt% of the following polypropylene and 40 to 15 wt% of the following talc:

(1) polypropylene that is homopolypropylene, blockpolypropylene or a blend of homopolypropylene and blockpolypropylene, and has a melt flow rate of 2 to 40 g/10 min.;

(2) talc that has a whiteness degree of 96% or more, and an average particle diameter of 4 to 10 μm .
